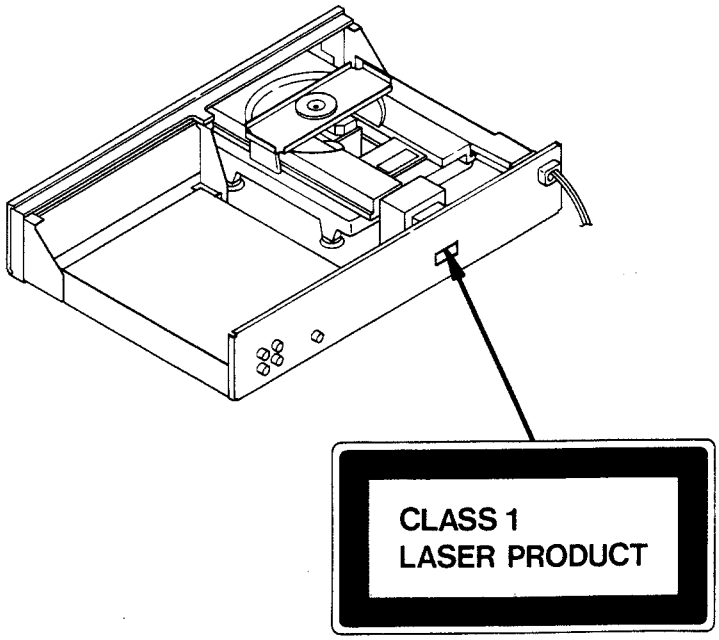
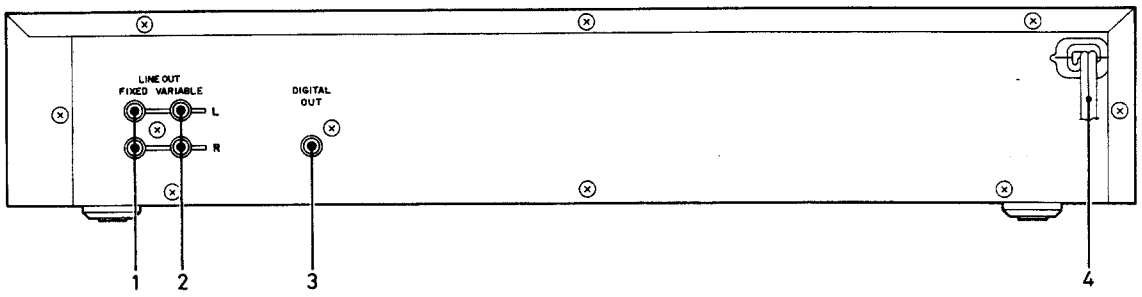
CAUTION



REAR PANEL

1. Fixed-level out put jacks.
2. Variable-level output jacks.
3. Digital output jack.
4. AC line cord.



The lightning flash with arrowhead, within an equilateral triangle, is intended to alert the user of the presence of uninsulated "dangerous voltage" within the product's enclosure; that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user of the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

FRONT PANEL

1. Power on/off.
2. Headphones.
3. Disc drawer.
4. Open/close.
5. Stop.
6. CDR (controlled dynamic range).

: Depth 298 mm (11.78 in.)
Net Weight : 4.5 kg (10 lb)

Note: Nominal specs represent the design specs: All units should be able to approximate these - some will exceed and some may drop slightly below these specs. Limit specs represent the absolute worst condition that still might be considered acceptable. In no case should a unit fail to meet Limit specs.

SERVICE SAFETY PRECAUTIONS (UL)

1. Use exact replacement parts for critical locations, marked "⚠".
2. Return lead dress to original position, and re-install protective covers.
3. Before returning to customer, test for shock hazard; use either method A or B:
   A. Leakage test, "cold" :
      1. Unplug AC cord; turn power switch ON.
      2. Connect one lead of High Voltage Insulation Tester to both prongs of AC plug.
      3. Touch other lead to all exposed metal parts.
      4. Impedance measurement must be 0.3 — 5.0 Megohms.
   B. Leakage test, "live" :
      1. Plug unit directly into AC outlet; do not use isolation transformer.
      2. Connect one lead of Leakage Current Tester to earth ground.
      3. Touch other lead to all exposed metal parts.
      4. Leakage measurement must be less than 0.5 milliamps.

INSTRUCTION FOR HANDLING OPTICAL SYSTEM BLOCK PICK-UP

Electrostatic breakdown of the laser diode in the optical system block may occur due to a potential difference caused by electrostatic charge accumulated on clothing, human body, etc.
A ground must be provided as follows to prevent any electrostatic charge during unpacking or repair work.

1. Ground for Human Body

Be sure to wear a grounding band (1 Mohm) that is properly grounded to remove any static electricity that may be charged on the body.

2. Ground for Work bench

Be sure to place a conductive sheet (1 Mohm) or copper plate with proper grounding on the work bench or other surface on which the pick-up is to be placed.

3. Because the static electricity charge on the clothing does not discharge through the body grounding band, do not let clothing contact the pick-up unit.

INCORRECT

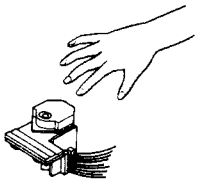

Figure 4

CORRECT

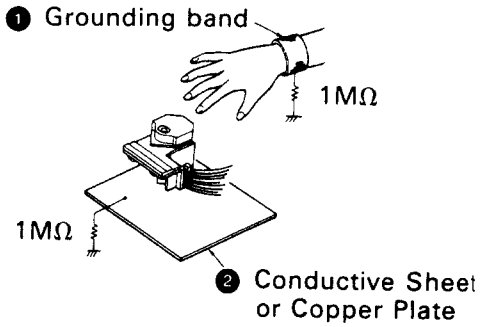

Figure 5

Note: Laser diodes are so susceptible to damage from static electricity that even if a static discharge does not ruin the diode, it can shorten its life or cause it to work improperly.

PRECAUTIONS FOR CHECKING BEAM EMISSION OF LASER DIODE

The laser beam of this unit is focused on the reflecting surface of the objective lens in the optical system block. Therefore, keep your eyes at least 12 inches (30 cm) away from the objective lens when the laser diode is ON.
[Operation Check Method for Laser Diode and Focus Search Function]
When the POWER switch is turned ON after the chucking arm is removed, observe the objective lens and confirm that the following operations are performed properly.
(The optical system block should be at the lead-in area position when it is checked at this time.)
(1) The laser should be at the innermost position after the chucking arm is removed.
(2) The diffused light of the laser beam can be seen when the POWER switch is turned ON.
(3) Vertical (up and down) movement of the objective lens (2 or 3 times) will take place.

PICK-UP REPLACEMENT

Caution:

Laser diodes are extremely susceptible to damage from static electricity. Even if a static discharge does not ruin the diode, it can shorten its life or cause it to work improperly. When replacing the pick-up, use a conductive mat, a grounded soldering iron, and so on, to protect the laser diode from static damage.

1. Remove the CD mechanism assembly by referring to Disassembly Instructions.

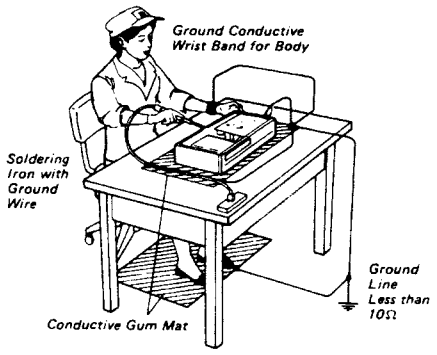

Figure 6

2. Remove two screws (A) holding the clamper base. (See Figure 7)

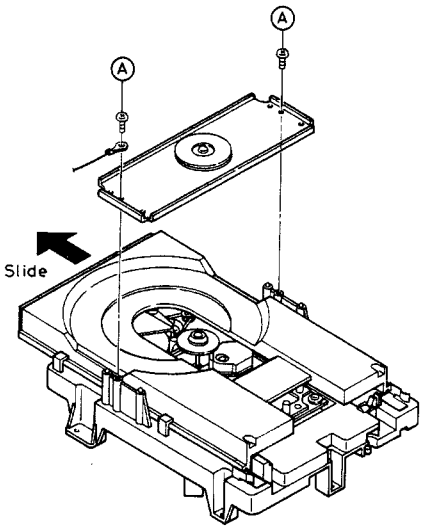

Figure 7

3. Turn loading gear clockwise with a small screwdriver (max. 1/ 2turn) while pulling the tray slightly. (See Figure 8)

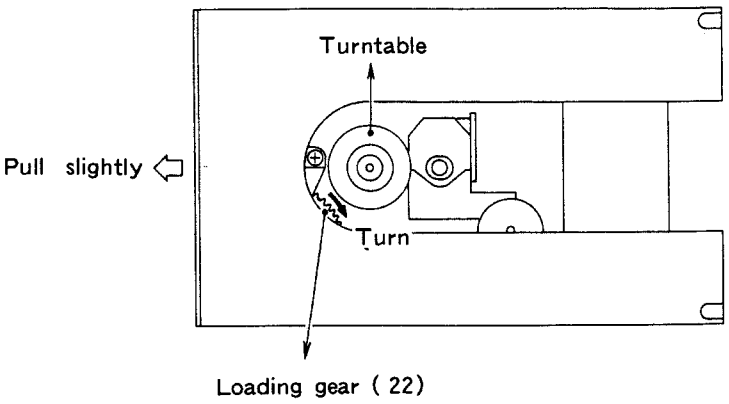

Figure 8

4. Remove washer Ⓓ holding the gear and remove the gear. (See Figure 9)

5. Remove two screws Ⓔ . (See Figure 9)

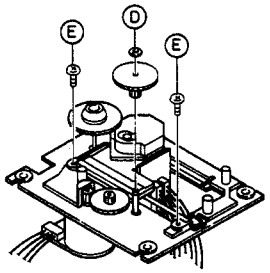

Figure 9

6. Take out the pick-up ①. Than pull out the shaft ②. (See Figure 10)

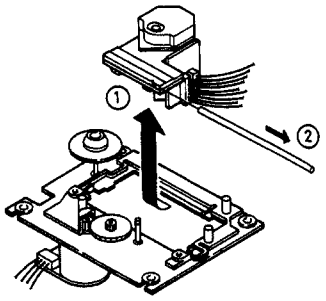

Figure 10

7. Place shorting round as shown in Figure 11 and remove both wire connectors.

8. Unpack new laser.

9. After you connect the wire connectors, desolder and remove the shorting tab. (See Figure 11)

Adjustment of Focus Servo

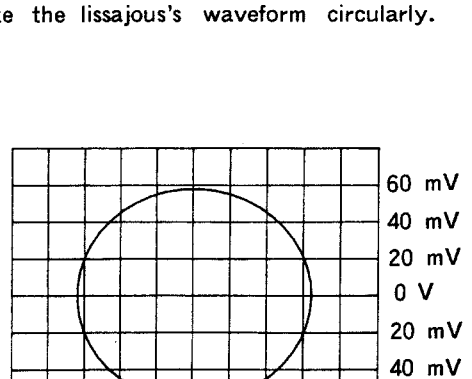
Focus Gain Setting

1. Remove the short ring from CP102 of the set.
2. Connect oscilloscope, special circuit (Figure 13), AF—OSC and the set as shown Figure 14.
3. Make the set to TEST MODE and load the test disc (SONY YEDS-7 which has no damage) on the tray.
4. Press Key from No. 1 to No. 7 in order of Key No. on TEST MODE (Ref. TEST MODE setting procedure and Key operation on TEST MODE).

5—1. Apply the sine wave signal of 1.8 kHz, about 150 mVrms from the AF—OSC.
(Audio technica Pick—up : Serial No. 50000001～50008200)

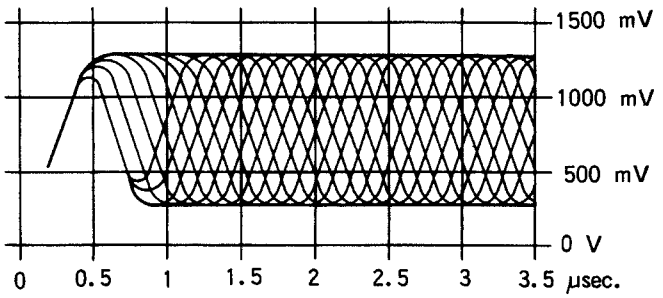
5—2. Apply the sine wave signal of 1.3 kHz, about 100 mVrms from the AF—OSC.
(Sony Pick—up : Serial No. 50008201～)

6. Adjust VR103 to make the lissajous's waveform circularly.



Adjustment of Focus Offset

1. Join CP102 of the set with the shortring.
2. Connect oscilloscope to the set as shown Figure 15.
3. Make the set to TEST MODE and load the test disc (SONY YEDS-7 which has no damage) on the tray.
4. Press Key from No. 1 to No. 7 in order of Key No. on TEST MODE.
5. Adjust VR102 to make the eye patterns which has the maximum amplitude and the biggest diamond windows.



The above is an example of good eye pattern.
The diamond windows in the center portion are large and clear.

Adjustment of Tracking Servo

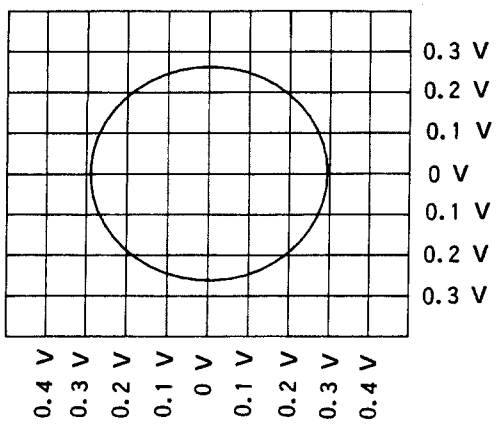
Tracking Gain Setting

1. Remove the shortring from CP101 of the set.
2. Connect oscilloscope, special circuit (Figure 13), AF—OSC and the set as shown Figure 14.
3. Make the set to TEST MODE and load the test disc (SONY YEDS-7 which has no damage) on the tray.
4. Press Key from No. 1 to No. 7 in order of Key No. on TEST MODE.

5—1. Apply the sine wave signal of 1.6 kHz, about 500 mVrms from the AF—OSC.
(Audio technica Pick—up : Serial No. 50000001～50008200)

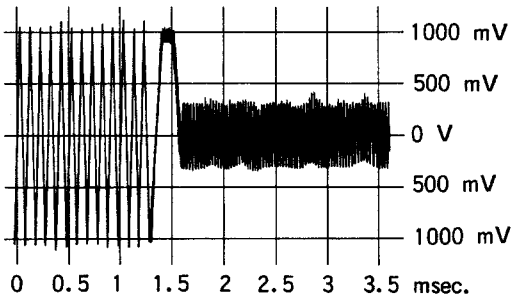
5—2. Apply the sine wave signal of 1.15 kHz, about 400 mVrms from the AF—OSC.
(Sony Pick—up : Serial No. 50008201～)

6. Adjust VR104 to make the lissajous's waveform circularly.



Adjustment of E-F Balance

1. Join the shortring to CP101 of the set.
2. Connect oscilloscope to the set as shown Figure 16.
3. Make the set to TEST MODE and load the test disc (SONY YEDS-7 which has no damage) on the tray.
4. Press Key from No. 1 to No. 6 in order of Key No. on TEST MODE and Tracking servo off.
5. Adjust VR101 to make the waveform symmetrically on the oscilloscope screen.



Adjustment of PLL (Phase Lock Loop)

1. Short TP110 (GND) and TP111 (ASY) of the set and connect frequency counter to the set as shown Figure 17.
2. Make the set to TEST MODE and load the test disc (SONY YEDS-7 which has no damage) on the tray.
3. Press Key from No. 1 to No. 3 in order of Key No. on TEST MODE.
4. Adjust VR105 to show the counter reading is about 4.32 MHz.
5. Open TP110 and TP111 of the set and press Key from No. 4 to No. 7 in order of Key No. on TEST MODE.
6. Reconfirm the counter reading is within 4.3218 MHz $\pm$0.0025 MHz.

TROUBLE SHOOTING GUIDE

Connect TP 114 and TP 115 with a wire.

Set the power switch to on.

Is the display as Fig. 1?

No

- Check the power supply lines.
- Check the circuit around the μ-com.
- IC 105 is defective.

Yes

This set is in TEST MODE. Each keys work as table 1.

Does the tray operation work correctly?

No

Yes

Load a CD and press " OPEN " key to close the tray.

Push the " CDR " key to set the pick-up at the home position.

Does the " CDR " indication on the FL display disappear soon?

No → B

Yes

Press the " REPEAT " key to make focus seavo on.

Does the " REPEAT " indication light up?

No → C

Yes

(Focus servo on)

Press " A–B " key to make all the servo on.

Is waveform at TP 101 of IC 101 as Fig. 2 ?

SCHEMATIC DIAGRAM

Make leakage current or resistance measurements to determine that exposed metal parts are acceptably insulated from the supply circuit before returning the appliance to the customer.

Leakage current should not exceed 0.5 mA as measured through a 1.5 Kohm resistor paralleled by a 0.15 mfd capacitor to the earth ground.

DIFFERENT MODELS OF THE PICK-UP HEAD.

This model uses a pick-up head with either Part No. 0020−008−0−00 (D-77-LM1) or 0020−006−0−00 (KSS-210A). When you replace the pick-up head, please use KSS-210A instead of D-77-LM1. With this replacement, the values of some electrical parts will have to be changed.

Please read Cautions of replacement of pick-up on pages 7∼10 before exchanging the pick-up head.

1. Please exchange the parts, referring to the below table.

A: Serial No. 50000001∼50008200
B: Serial No. 50008201∼
